

## TCSD - Westside Line Replacement Project (TEDA) Status Report - October, 2022

### MONTHLY PROJECT SUMMARY

The dam spillway improvement project currently being undertaken by TEDA includes a modification to some of the District's infrastructure. Specifically, the sewer line that previously ran along the face of the dam is being relocated to a stand-alone support structure (bridge) just down stream from the dam. The bridge has been completed, and the new pipeline has been installed on the bridge. However, the District is concerned that the bridge appears to be sagging, and that the pipe saddles appear to be the wrong size. These issues are illustrated in the photos below. The District is currently evaluating options to address these concerns.
